

for Providing Certificate Validation and Other Services, which is hereby incorporated by reference, and returned to bank interface 222, which forwards the response to filter engine 306.

VW
5/13/08 ³ Page 9, lines ~~6~~-7, amend the paragraph as follows:

Thus, an important attribute of passive integration is that SDK Web server 312 receives all incoming connections previously destined for Web server 220. Few changes to original Web server ~~312~~ 220 are needed, except that it is no longer accessible from the Internet. Additionally, existing certificates used for SSL encryption may need to be reconfigured to use SDK Web server 312.

Page 9, lines 12-15, amend the paragraph as follows:

A computer platform for implementing Web server 312 preferably contains a minimum of 128 Mb of random access memory and a 10 Mb hard disk. In a preferred embodiment, the system may be implemented on the MICROSOFT WINDOWS NT ~~Microsoft Windows NT~~ platform, with the following recommended configuration.

Page 9, lines 16-35 to Page 10, lines 1-2, delete table.

Page 10, lines 4-7, amend the paragraph as follows:

In a preferred embodiment, Java JAVA is used as a language/platform and is compiled to an intermediate format called byte codes. These byte codes are then executed by a virtual machine. If a Java JAVA Virtual Machine (JVM) is available for the target platform, the Java JAVA code can be executed on that platform

Page 11, lines 1-9, amend the paragraph as follows:

A number of ISA technologies exist; some are specific to one Web server and others are industry-standards supported by most major Web servers. Because the present-system preferably supports many
